RESEARCH PROFILE

My research explores ways that socio-cultural relationships and networks, and the complex emotions these entail, shape grassroots engagements with environmental issues. I have examined micro-political alliances and conflicts around biodiversity conservation, both rural (national parks in Borneo, community-initiated projects in New Caledonia) and urban (New Jersey wetlands). Currently, I am focusing on grassroots negotiations with and questioning of the expansion of extractive industries, in New Caledonia (Kanak responses to multinational mining and refinery projects) and the U.S. Midwest (American Indian-led resistance to industries supporting the development of unconventional fossil fuels: oil pipelines and frack sand mining).
